

VNDRLY.ai — Production Readiness Test Script

Version 1.0 — August 12, 2026

Web target	https://vndrly.ai
iOS target	VNDRLY Field Mobile via TestFlight (production API baked in: <code>vndrly.ai</code>)
Tester	_____
Date started	_____
Build / deploy tested	_____

Purpose. A single, direct walkthrough that (A) creates a brand-new Partner and Vendor through the onboarding tool, (B) drives one work ticket through the entire lifecycle while touching every web-app surface, (C) verifies the iOS app end to end, and (D) ends with a go/no-go checklist for production. Follow it top to bottom; each step has a checkbox and an expected result. When a step fails, log it in the Defect Log (last page) with the step number and keep going unless the failure blocks later steps.

How to use this script

1. **Work top to bottom.** Later steps depend on data created in earlier steps (the new Partner/Vendor orgs and the ticket).
2. **Checkboxes:** mark ☐ → ☒ when the expected result matches, or **X** and log a defect.
3. **Test data naming:** everything you create is prefixed **UAT-** so it is easy to find and clean up afterwards (e.g. partner "UAT Petroleum Co", vendor "UAT Field Services").
4. **Two browsers help.** The lifecycle section switches between Partner, Vendor, and Admin sessions frequently. Use two browser profiles (or one normal + one incognito) to avoid constant logout/login.
5. **Time required:** roughly 3–4 hours for the web pass, 1–1.5 hours for iOS.

Known platform limitations (do NOT log these as defects)

Area	Current state
Outbound email	Disabled in code ("Outbound email skipped"). Password-reset, invite, invoice, and 1099 e-delivery emails will not arrive . Use on-screen links: employee invites can be copied from the Employees page; skip email-arrival checks.
Ask VNDRLY (AskV)	Requires the Anthropic key on the server. If unconfigured, expect a clear failure message — verify the panel opens and fails gracefully. Voice input additionally requires the OpenAI key.
QuickBooks Online / OpenAccountant	Require Intuit/OA secrets on the server. If unconfigured, the Connect buttons should fail with a clear configuration error, not a crash.
Maps	Crew Map / Site Map / site pickers require the Mapbox token. Blank map tiles = missing token, not an app bug.

Test accounts (canonical — do not change these passwords)

Login	Password	Role
admin	vndrly123	VNDRLY Admin
mach	mach123	Partner (Mach)
exxon	exxon123	Partner (Exxon)
baker	baker123	Vendor (Baker)
winchester	winchester2	Vendor (Winchester)
joe.boggs@winchester.com	winchester2	Field employee (Winchester)

Plus the accounts **you create** in Part A (write them here):

Org	Login (email)	Password
UAT Petroleum Co (partner admin)		
UAT Field Services (vendor admin)		

Org	Login (email)	Password
UAT field employee		

Pre-flight (5 minutes)

☐	Step	Expected
☐	0.1 Open https://vndrly.ai in a fresh browser session	Login page loads: dark theme ("vdark"), brand mark, Sign In to Portal button
☐	0.2 Check https://vndrly.ai/api/health	<code>{"status": "ok"}</code>
☐	0.3 On the login page, toggle theme (top-left) and language (English/Spanish)	Page flips to light theme; labels switch to Spanish and back
☐	0.4 Log in as <code>admin / vndrly123</code> , then sign out	Admin Portal dashboard loads; sign-out returns to login

PART A — Onboarding (creates all test data for the rest of the script)

A1. Create a Partner with the onboarding tool (~15 min)

Route: `/signup` → **Begin Partner Onboarding** (direct: `/onboarding/partner`). Do this logged out.

☐ Step	Expected
☐ A1.1 From the login page click Onboard your organization →	Chooser page <code>/signup</code> shows Partner and Vendor onboarding options
☐ A1.2 Click Begin Partner Onboarding	Wizard "Partner Onboarding" opens on step Company Basics with a 7-step stepper: Company Basics · Platform Agreement · Branding · First Site · Tax & Billing · Preferences · Invite Team
☐ A1.3 Fill Company Basics: Company Name UAT Petroleum Co , Your Name UAT Partner Admin , a real email you control, phone, password (8+ chars), confirm	All fields accept input; a duplicate-name warning appears only if a similar partner exists (if so, tick "I'm sure this is a different partner")
☐ A1.4 Click Create account	Dialog: " Congratulations! Your account has been successfully created! " with Continue onboarding / Go to VNDRLY.ai now. You are now signed in; an email-verification banner may appear (email is disabled — ignore, do not log)
☐ A1.5 Continue onboarding → Platform Agreement : scroll the EULA, tick the acceptance checkbox, Continue	Cannot continue without scrolling/accepting; step completes
☐ A1.6 Branding : upload a horizontal logo and a square logo, pick a primary and accent color	Live header preview updates with your logo/colors
☐ A1.7 First Site : name UAT Test Pad #1 , a real street address, keep the generated site code, geofence radius default (1609 m)	Address accepted; site code shown (format <code>SITE-XXXXXXX</code>)
☐ A1.8 Tax & Billing : Federal Tax ID (e.g. 12-3456789), State Tax ID, physical + billing addresses	Fields accept input
☐ A1.9 Preferences : hours of operation text, default operating radius (e.g. 100 miles)	Accepted
☐ A1.10 Invite Team : enter one teammate email → click Finish setup	Wizard completes and lands on the Partner Portal dashboard

☐	Step	Expected
☐	A1.11 Sidebar → Partner	Your partner detail page shows the branding, tax IDs, and addresses you entered
☐	A1.12 Sidebar → Site Locations	UAT Test Pad #1 exists with your radius and site code
☐	A1.13 (Resume check) Log out, log back in as the UAT partner	If any step was skipped, dashboard shows a Finish setting up your account banner that deep-links to the skipped step

A2. Create a Vendor with the onboarding tool (~20 min)

Route: `/signup` → **Begin Vendor Onboarding** (direct: `/onboarding/vendor`). Do this logged out (new browser profile is easiest).

☐	Step	Expected
☐	A2.1 <code>/signup</code> → Begin Vendor Onboarding	Wizard "Vendor Onboarding" with 8-step stepper: Account · Platform Agreement · Branding · Tax IDs · Service Area & Work Types · Compliance · Rates & 1099 · First Employee
☐	A2.2 Account : Company UAT Field Services , Your Name UAT Vendor Admin , a second real email, phone, password	Create account → congratulations dialog, signed in
☐	A2.3 Platform Agreement : scroll + accept	Completes
☐	A2.4 Branding : upload a logo, pick a brand color	Live preview updates
☐	A2.5 Tax IDs : federal + state tax IDs, physical + billing addresses	Accepted
☐	A2.6 Service Area & Work Types : set operating radius (e.g. 50 mi); check at least 2 work types from the catalog	Checkbox catalog grouped by category; banner notes pricing is set later under "Your services & rates"
☐	A2.7 Compliance : carrier, policy number, future expiration date, upload a COI file (any PDF), coverage notes	Upload succeeds and shows the file
☐	A2.8 Rates & 1099 : baseline hourly rate (e.g. 85), daily OT after (8), weekly OT after (40), OT multiplier (1.5); choose Yes for 1099 e-delivery	Accepted
☐	A2.9 First Employee : first/last name UAT Fieldhand , a third email, phone → Finish setup	Wizard completes → Vendor Portal dashboard
☐	A2.10 Sidebar → Your services & rates (<code>/vendor-catalog</code>)	The work types you checked are listed; set a Price / Unit on each and save
☐	A2.11 Sidebar → Employees	UAT Fieldhand exists (role <code>field</code>)

☐	Step	Expected
☐	A2.12 Sidebar → Vendor	Vendor detail shows branding, tax IDs, insurance, and rates from the wizard

A3. Field employee invite (~10 min)

Email is disabled, so send the invite from the UI and copy the link.

☐	Step	Expected
☐	A3.1 As UAT vendor: Employees → open UAT Fieldhand → Send onboarding invite	Invite created; the invite URL is copied/shown (/onboarding/field/<token>)
☐	A3.2 Open the invite link in a logged-out browser	3-step wizard: Personal Info → Photo & Certs → Set Password
☐	A3.3 Personal Info: confirm name, phone, language English , role Field	Accepted
☐	A3.4 Photo & Certs: upload a profile photo (required); optionally tick PEC SafeLandUSA + expiration	Cannot continue without photo
☐	A3.5 Set Password (8+) → Finish setup	Lands signed-in on the Field Employee Portal (/field) with tabs Home · Schedule · Scan · Profile
☐	A3.6 (Alternate path) As vendor, open another employee → Enable web portal login → set email + temp password + force-change flag	Login is created; signing in with it forces a password change

A4. Connect the new orgs (admin, ~10 min)

The new Partner and Vendor need a relationship and assignments to transact.

☐	Step	Expected
☐	A4.1 Log in as <code>admin</code> . Sidebar → Partners	UAT Petroleum Co appears in the list with your branding
☐	A4.2 Sidebar → Vendors	UAT Field Services appears
☐	A4.3 Open UAT Petroleum Co → partner–vendor approvals/relationships → approve/link UAT Field Services (exact control: partner detail relationship section)	Vendor is now related to the partner
☐	A4.4 As UAT partner: Site Locations → open UAT Test Pad #1 → work assignments → assign UAT Field Services for one of its work types	Assignment saved; this site/work-type pair is what the ticket in Part B uses
☐	A4.5 As <code>admin</code> : Platform catalog (/catalog)	Platform-wide work types list loads; add one test entry UAT-Widget-Service and confirm it appears (used to verify catalog CRUD)

PART B — Web application: full functional pass

B1. Hotlist marketplace (Partner posts, Vendor bids) (~15 min)

The Hotlist lives on the **Dashboard** (/), not its own route.

☐ Step	Expected
☐ B1.1 As UAT partner, Dashboard → Hotlist → Post Hotlist Job : site UAT Test Pad #1 , a work type your vendor offers, description, amount	Job appears in the Hotlist with a live (SSE) indicator
☐ B1.2 Print Hotlist	/print-hotlist renders the open jobs
☐ B1.3 As UAT vendor, Dashboard → Hotlist	The job is visible (vendor in radius and offers the work type)
☐ B1.4 Place a bid (amount, ETA, note); add a comment	Bid + comment appear; partner side updates live without refresh
☐ B1.5 As UAT partner, review bids → Award the UAT vendor's bid	Bid marked awarded
☐ B1.6 Convert awarded bid → ticket	New ticket in awaiting_acceptance ; note its number: #_____

B2. Ticket lifecycle — happy path (~30 min)

Use the ticket from B1.6 (or Partner → Tracking → **Create New Job**).

☐ Step	Actor	Expected
☐ B2.1 Tracking (/tickets): find ticket #_____; try each status filter pill	Partner	Pill filters work; ticket shows awaiting_acceptance
☐ B2.2 Open ticket → Accept	Vendor	Status → initiated ; audit trail records it
☐ B2.3 Schedule ticket : assign UAT Fieldhand , set date	Vendor	Saved; appears on the employee's Schedule
☐ B2.4 As UAT Fieldhand (/field): open the ticket and progress it (En Route → On Location → Check In)	Field	Status → in_progress , lifecycle → on_site; GPS events in ticket History with "View on map"
☐ B2.5 Add Parts & Labor : one Labor line and one Part line	Field/Vendor	Lines save; tax preview computes; totals correct
☐ B2.6 Add a comment with a photo	Field	Comment + thumbnail visible to vendor/partner live

☐	Step	Actor	Expected
☐	B2.7 Check Out → Send for Review	Field	Status → pending_review
☐	B2.8 Submit for partner approval	Vendor	Status → submitted (requires line items)
☐	B2.9 Approve (+ optional vendor rating)	Partner	Status → approved ; rating recorded
☐	B2.10 Disperse Funds : method ETF, reference, note, receipt upload	Partner AP	Status → funds_dispersed ; Payment Details visible
☐	B2.11 Print ticket	Any	<code>/print-ticket/:id</code> renders lines, totals, history
☐	B2.12 Audit trail → export CSV and PDF	Admin	Both download and match on-screen events

B3. Ticket lifecycle — branches (~20 min)

Create three quick tickets (Partner → Tracking → **Create New Job**) against UAT Test Pad #1.

☐	Step	Expected
☐	B3.1 Ticket 2: vendor Deny with reason	Status → denied ; partner sees Find Vendor to re-route
☐	B3.2 Ticket 3: run to submitted , partner Kickback with reason → fix → resubmit	kicked_back → editable → submitted again
☐	B3.3 Ticket 4: vendor office Cancel job	cancelled ; confirm a field/foreman login has NO cancel button
☐	B3.4 On an in_progress ticket: vendor Mark Awaiting Payment	awaiting_payment ; partner AP can Disperse from here
☐	B3.5 As <code>admin</code> on the dispersed ticket: Reverse dispersal	Returns to approved ; audit trail records reversal
☐	B3.6 Flag a ticket; check Flagged page (<code>/flagged</code>); unflag	Appears and clears for admin/partner/vendor
☐	B3.7 Nudge up (vendor → partner) and down (partner → field)	Recipient's bell shows the nudge; no status change

B4. Sites, QR codes, visitors (~15 min)

☐	Step	Expected
☐	B4.1 Partner: Site Locations → Add Site : try Use my location , drag the map pin, adjust radius, upload wellhead photo	Address ⇌ coordinates geocode both ways; map preview with radius circle; auto site code
☐	B4.2 Site detail → Print visitor QR	<code>/print-visitor-qr/:id</code> renders a scannable QR
☐	B4.3 Logged out, open <code>/visit/<site-code></code>	Public visit page loads with site name

☐	Step	Expected
☐	B4.4 Visitor check-in (name + safety acknowledgment) then check out	Visit recorded
☐	B4.5 Partner: Visitors page → open the visit	Visit listed; detail shows map pin
☐	B4.6 Site detail: Deactivate then reactivate	While inactive, new tickets against it are blocked with a clear message

B5. Live maps (~10 min)

☐	Step	Expected
☐	B5.1 Vendor: Crew Map	Map renders; Live pill connected (SSE); on-clock employees appear
☐	B5.2 Click a pin → Crew replay	Day-replay timeline of pings
☐	B5.3 Partner: Site Map → select UAT Test Pad #1	Employees near site, recent tickets/trips, compliance cards
☐	B5.4 Verify: partner has no Crew Map nav; vendor has no Site Map nav	Role scoping correct

B6. Money: invoices, bills, statements (~20 min)

☐	Step	Expected
☐	B6.1 Vendor: Invoices — filter by period/number; open an invoice	Filters work; detail shows lines and ledger
☐	B6.2 Invoice detail: Send (email disabled — expect graceful no-send), Record payment , Credit memo , Late fees	Ledger updates after each action
☐	B6.3 Partner: Bills to Pay	Approved/unpaid work appears as payables
☐	B6.4 Statements (/statement) as vendor, partner, and admin	Party statement renders; admin can pick any party
☐	B6.5 Invoice detail: multi-select lines → Set 1099 category → Undo	Applies and reverts

B7. Reports, 1099, accounting connections (~20 min)

☐	Step	Expected
☐	B7.1 Vendor Reports : A/R aging, revenue by partner / work type / AFE, sales tax collected, crew cost	Cards load (Baker/Winchester have history)

☐	Step	Expected
☐	B7.2 Partner Reports : A/P aging, spend by vendor / work type / AFE, sales tax paid	Cards load
☐	B7.3 1099 section (either role): NEC worksheet, MISC, K preview — JSON/CSV/PDF exports	Files download and open
☐	B7.4 Admin Reports : 1099 filing dashboard, category change log, IRS FIRE export (TXT)	FIRE file downloads
☐	B7.5 Vendor Reports: Connect QuickBooks Online	With secrets: OAuth window; without: clear config error, no crash
☐	B7.6 Vendor Reports: Connect OpenAccountant (OAuth and API-key dialog)	Same expectation as B7.5
☐	B7.7 Admin: 1099 transmitter (/admin/1099-transmitter) — edit a T-record field, save	Saves; history paginates

B8. Safety (~15 min)

☐	Step	Expected
☐	B8.1 Any role: Report safety issue (/safety-report, from dashboard card or ticket) — type "near miss", description; try the anonymous toggle	Event submits
☐	B8.2 Submit a second report with stop-work against a UAT site	Site becomes inactive; new tickets blocked
☐	B8.3 Partner (HSE) or admin: Safety inbox (/safety) → open the event → add note → Close event	Event closes
☐	B8.4 Reactivate the stopped site (site detail, HSE/admin gate)	Site active again; ticket creation works
☐	B8.5 Safety training (/safety-training, via dashboard banner) — complete a module	Completion recorded; banner clears

B9. Notifications, AskV, account plumbing (~15 min)

☐	Step	Expected
☐	B9.1 Bell → Notifications inbox: mark read/unread, delete, open a ticket link	All actions work; deep link opens the ticket
☐	B9.2 Notification preferences : toggle categories, set DND hours	Saves and persists on reload
☐	B9.3 Ask VNDRLY pane (any portal): open, send "what tickets are in progress?"	With Anthropic key: role-aware answer; without: clear failure, no crash
☐	B9.4 Context switching : log in as a user with 2+ memberships (or your UAT user if invited to both orgs)	Blocking org picker after login; sidebar switcher swaps context and data

☐ Step	Expected
☐ B9.5 Forgot password (/forgot-password)	Form submits gracefully (email disabled — no mail arrives; do not log)
☐ B9.6 Dark/light toggle + English/Spanish toggle inside the app	Theme and locale switch and persist

B10. Admin-only surfaces (~10 min)

☐ Step	Expected
☐ B10.1 VNDRLY (/admin/vndrly): edit platform brand color; Add VNDRLY Employee (temp password shown)	Saves; new admin can log in and is forced to change password
☐ B10.2 Rate limits (/admin/rate-limits)	Live throttle budgets table; Refresh works
☐ B10.3 Removed comments (/admin/removed-comments)	Soft-deleted comments audit (delete a test comment on a ticket first, then find it here)
☐ B10.4 Employees (/field-employees): open UAT Fieldhand → verify PEC cert fields, disable credentials , re-enable	Credential disable blocks login; re-enable restores
☐ B10.5 Catalog health (/catalog-health)	Data-quality report loads
☐ B10.6 Confirm partner/vendor logins get 403/redirect (not a crash) on /admin/vndrly and /admin/rate-limits	Admin routes protected

B11. Foreman portal + field web portal (~15 min)

Give one UAT employee the **foreman** role (vendor → Employees → edit role), then log in as them.

☐ Step	Expected
☐ B11.1 Login lands on Foreman Portal (/foreman) with tabs Today · Schedule · Map · Crews · Analytics · Scan · Profile	Correct portal for vendorRole: foreman/both
☐ B11.2 Today : quick actions — Alerts, Start job, Schedule, Safety Reports	All four open
☐ B11.3 Crews : save a crew preset with UAT Fieldhand	Preset saved, reusable when scheduling
☐ B11.4 Start job → create a ticket; add crew check-in from Crew & Time ; Close for Review	Works; foreman has NO cancel option
☐ B11.5 Analytics : my tickets, on-site today, awaiting review, kickback trend	Cards render
☐ B11.6 As plain field user (/field): Home · Schedule · Scan · Profile tabs; Send for Review on a ticket; Profile → language/theme/org switch; Compliance Card	Field portal complete; compliance card shows QR

PART C — iOS app (VNDRLY Field Mobile via TestFlight)

Setup: install the latest TestFlight build on a physical iPhone (GPS needed). The build talks to production (`vndrly.ai`) — the same data as Part A/B. Have the UAT Fieldhand, foreman, vendor, and partner credentials ready. Bring the phone to a site inside a geofence if possible; otherwise note geofence steps as "not testable at desk".

C1. Login, consent, and permissions (~10 min)

☐ Step	Expected
☐ C1.1 Launch app logged out	VNDRLY / Field Employee Portal login; English/Spanish toggle top-right
☐ C1.2 Toggle Spanish, then back	All labels flip and persist
☐ C1.3 Sign in as UAT Fieldhand	Prompt Enable Face ID? — accept; lands on tabs
☐ C1.4 First field login → Share your live location while on the clock?	Consent screen forced; Accept & turn on → iOS location permission prompts (While Using + Always)
☐ C1.5 Kill and relaunch the app	Face ID auto-prompt signs you in
☐ C1.6 Tap the EULA link on the login screen (log out first)	Opens <code>vndrly.ai/legal/eula</code> in browser

C2. Field employee core loop (~25 min)

☐ Step	Expected
☐ C2.1 Home tab: section Tracking lists open jobs; pull-to-refresh	The ticket scheduled in B2.3 (or a new one) is listed
☐ C2.2 Tab Scan → grant camera → scan the printed site QR from B4.2	Opens Start New Job with the site prefilled (note: authenticated Scan starts a job, not a visitor check-in)
☐ C2.3 Complete Start New Job : work type(s), description, answer " Are you on site now? " → Not yet	Ticket created in Pending Arrival ; opens Tracking screen
☐ C2.4 Tap En Route	Starting Mileage modal (Skip/Submit); lifecycle → <code>en_route</code> ; Live location: active pill appears
☐ C2.5 Tap On Location when at/near the site	Lifecycle → <code>on_location</code>

☐	Step	Expected
☐	C2.6 Tap Check In inside the geofence	Toast " Checked in — you're on site "; status → in_progress, lifecycle → on_site. (Outside the geofence: expect a clear geofence rejection)
☐	C2.7 Web check: vendor Crew Map on desktop	Your phone's pin is live on the map
☐	C2.8 On the ticket: add a Parts & Labor line (Part, qty, unit price)	Line saves; totals update
☐	C2.9 Comments : take a photo with the camera and post	Photo uploads; visible on web ticket immediately
☐	C2.10 Tap Check Out	Ending Mileage modal; lifecycle → off_site
☐	C2.11 Tap Close for Review	Status → pending_review; office is notified
☐	C2.12 History from Home	The completed job appears
☐	C2.13 Schedule tab	Assigned/scheduled jobs for the next 14 days
☐	C2.14 Profile : stop location sharing, restart it; change language; Edit Profile photo; Compliance Card QR	All persist; card renders

C3. Foreman on mobile (~15 min)

Sign in as the foreman-role user from B11.

☐	Step	Expected
☐	C3.1 Home tab shows Foreman Portal with Quick actions (Alerts, Start job, Schedule, Safety Reports) and Active jobs	Extra tabs visible: Map , Crews , Comms
☐	C3.2 Crews : create/edit a crew	Saved
☐	C3.3 On a ticket: Crew & Time — add crew member, check in/out an employee, bulk check-out	Labor summary updates
☐	C3.4 Schedule tab → Schedule Ticket → pick ticket, crew, reminders	Saved; Crew Tracker link appears on the ticket
☐	C3.5 Map tab	Live crew pins; tap → day replay
☐	C3.6 Comms tab: pick an active ticket, Hold to talk	PTT records/sends; non-foreman deep link shows locked message
☐	C3.7 Close a ticket for review while crew still checked in	Prompt Crew still checked in → Check Out & Close

C4. Office roles on mobile (~15 min)

☐	Step	Expected
☐	C4.1 Sign in as UAT vendor admin	Home = Vendor Portal , list Team tickets ; pending work offers show Commit/Pass
☐	C4.2 On an awaiting_acceptance ticket: Accept / Deny banner	Works like web
☐	C4.3 On an in_progress ticket: Awaiting Payment → confirm modal	Status → awaiting_payment
☐	C4.4 Sign in as UAT partner	Home = Partner Portal , Site tickets ; Map tab = Site crew map; Add site CTA works
☐	C4.5 Partner (AP): on an approved ticket → Disperse Funds (method, reference, receipt photo)	Status → funds_dispersed; Payment Details visible; reverse if permitted
☐	C4.6 While a field ticket is open, have the vendor remove the site/work-type assignment on web	Mobile shows Your assignment was changed banner; lifecycle buttons grey out; Cancel this ticket offered

C5. Safety, notifications, AskV, visitor mode (~15 min)

☐	Step	Expected
☐	C5.1 Report safety issue (Home or ticket) — submit one report	Success; appears in My safety reports
☐	C5.2 Open a safety event detail from the list	Renders event data
☐	C5.3 Safety training from Profile banner — play a module	Completion recorded
☐	C5.4 Notifications : categories filter, mark read, delete, open a ticket deep link; gear → Notification settings (toggles + DND)	All work; push notification (from a nudge or crew punch) deep-links correctly
☐	C5.5 AskV tab: send a message	With Anthropic key: role-aware reply; without: graceful failure
☐	C5.6 Flagged tab	Flagged jobs list matches web
☐	C5.7 Sign out → Continue as Visitor → Visitor Sign-In (name + safety ack) → scan site QR → check in → check out	Guest 24h session; visit appears in web Visitors page; no portal tabs for guests
☐	C5.8 Org switching: sign in as a multi-membership user	Choose your organization modal; Home header org tap switches; Profile → Active organization works

PART D — Production go / no-go

D1. Release gate checklist

All of these must be true before promoting to production for real customers:

☐	Gate
☐	Part A: Partner and Vendor onboarding completed start-to-finish with no blocking defect
☐	Part B2: full ticket lifecycle (awaiting_acceptance → funds_dispersed) verified with real GPS events
☐	Part B3: every branch (deny, kickback, cancel, awaiting_payment, reverse) behaves and is audit-trailed
☐	Part B6/B7: money surfaces (invoices, bills, statements, 1099 exports) produce correct totals
☐	Part C2: iOS field loop (scan → en route → check in → parts/photos → check out → close for review) verified on a physical device against production
☐	Live maps show real phone pings (B5.1 + C2.7)
☐	Role scoping verified: no admin surfaces reachable by partner/vendor/field logins (B10.6); foreman cannot cancel (B3.3/B11.4)
☐	No defect marked P0/P1 remains open in the log below
☐	Decision on known limitations: outbound email OFF, and any unconfigured integrations (QBO/OA/AskV/Mapbox) are either configured or consciously deferred

D2. Post-test cleanup

☐	Step
☐	Remove or deactivate the UAT orgs (admin → Partners/Vendors → UAT Petroleum Co / UAT Field Services) once testing is done — or keep them as permanent staging orgs (recommended)
☐	Cancel any leftover open UAT tickets
☐	Delete the UAT-Widget-Service platform catalog entry (A4.5)

D3. Defect log
